

RWM FICWB

Brake Information Guide

The RWM FICWB or Field Installable Cam Wheel brake has just undergone a groundbreaking transformation. The 6, 8 and 10" sizes have been modified into an incredibly user friendly and simple design. While the old design utilized a series of plates, nuts and bolts to locate the brake, the new kit uses two formed parts to cleanly and precisely locate the brake brackets for optimum performance and functionality. The FICWB is much like our standard CWB brake, however it gives users the ability to install or un-install the brake as required in the field. These brakes are designed for use with the 75 or 76 series and will quickly turn a standard RWM swivel caster into a fully functioning brake equipped caster.

Options

- Equip any standard RWM 75/76 Series 6, 8 or 10" caster with our CWB setup without the hassle of purchasing a new or modifying an existing caster.
- New single piece formed bracket design eliminates components, eases installation, and improves appearance
- Use of standard RWM cam wheel brake component lowers cost and increases availability
- Adjustable cam wheel brake pad allows proper function with a wide array of wheel types
- Attractive zinc plate for corrosion resistance and years of reliable performance.
- Snug fit without the hassle of nuts and bolts for speedy installation!

*Contact factory for information on the 12" field installable brake
